MARKET COMMENTARY
NOVEMBER 2018

MULTI-ASSET INVESTMENT VIEWS

KEY

▲ Up from last month ▼ Down from last month

● Positive ● Postive/Neutral ● Neutral ● Neutral/Negative ● Negative

	Category	View	Comments
Main Asset Classes	Equities	●	Our models suggest valuations are turning more reasonable after recent corrections. However, this improvement has come with worsening momentum signals, which are approaching negative territory.
	Government Bonds	●	We remain negative on duration. Despite the improvement in valuation given the rise in yields, inflationary pressures continue to rise.
	Commodities	●	Top-down conditions remain supportive, but carry and momentum have deteriorated. Industrial metals and agriculture held up better than energy and gold is starting to show safe-haven characteristics.
	Credit	●	October saw spreads widening across sectors in all regions, accelerating weakness in credit that we have seen year to date.
Equities	US	●	With no surprises in the US mid-terms results, we expect investors to soon shift their attention towards fundamentals, including earnings, and also the Federal Reserve.
	Europe	●	Although valuations appear to be reasonable, momentum and cyclical indicators are still neutral.
	UK	●	We are still neutral on UK equities, as the market continues to be driven by political turmoil and Brexit noise.
	Japan	●	We retain a positive view. Attractive Japanese valuations, improving return on equity and increasing capital expenditure are compelling reasons for optimism.
	Pacific ex-Japan	●	Ongoing trade war developments, together with local country-specific risk factors, pose a threat to profits, but we keep a neutral stance.
	Emerging Markets	●	Valuations are attractive, especially following the significant sell-off so far this year. Investors may find the strong EM earnings story attractive in coming months.
	Government Bonds	US	●
UK		●	The market discounts two rate hikes, but the BoE has made it clear that if a Brexit deal is resolved then those hikes would likely occur earlier than currently expected.
Germany		●▲	With ongoing Italian budget negotiations and the European Central Bank highlighting no rise in rates before Summer 2019, investors will likely continue to own Bunds.
Japan		●	Despite the encouraging economic expansion, inflation remains weak. We remain neutral as monetary policy is likely to stay firm.
US Inflation Linked		●	We remain positive on US inflation. We expect price pressures to remain high even as growth slows given the lags to wages and inflation.
Emerging Markets Local		●	We maintain a neutral view as cyclical headwinds prevent us from taking advantage of the improvement in local market valuations.

	Category	View	Comments
Investment Grade Corporate Bonds	US	●	Fundamentals for bond holders are continuing to weaken as shareholder-friendly behaviour becomes more prevalent.
	Europe	●	While fundamentals remain robust, we believe the path of the European credit markets will be dictated by developments in Italy, Brexit, and changing leadership at the European Central Bank.
	Emerging Markets USD	●	We believe that the regional mix and fundamental path of earnings marginally favours high quality emerging market corporate bonds over their high yield counterparts.
High Yield Bonds	US	●	We expect the supply/demand situation in US high yield to deteriorate and maintain our view that it is overpriced and vulnerable.
	Europe	●	The European market is due a period of readjustment from what remain extraordinarily low levels of yield as conditions start to normalise.
Commodities	Energy	● ▼	Move to neutral. Supply and demand look more balanced after the US administration allowed continued buying of Iranian oil, while evidence for demand looks mixed.
	Gold	● ▲	Remove the negative bias in Gold as it starts to show safe-haven characteristics in the latest period of market correction.
	Industrial Metals	●	Fundamentals still positive overall. Very bearish sentiment means potential inventory re-stocking from current low levels, or trade war de-escalation, could provide support.
	Agriculture	●	We remain positive, with scope for further recovery from over-sold levels.
Currencies	US \$	●	Even though US growth today shows signs of slowing, we believe that the failure of global growth to recover and higher US rates will ultimately push the dollar higher.
	UK £	●	We continue to believe that the majority of Brexit fears have been priced into GBP, and see the currency as one of the few to benefit from rate hikes in 2019/2020.
	EU €	●	EUR weakness is likely to continue on a continued moderation of growth and inflation into next year, whilst issues of Italian and German political issues are likely to linger.
	JAP ¥	●	We expect yen strength in the coming months as global growth continues to slow, US yields to stop dragging on the US/Japan rate differential and very attractive valuation.
	Swiss F	●	CHF is likely to stay on par with USD as a safe haven for European investors, whilst there has been little vocal opposition from the Swiss National Bank so far due to stable export growth.

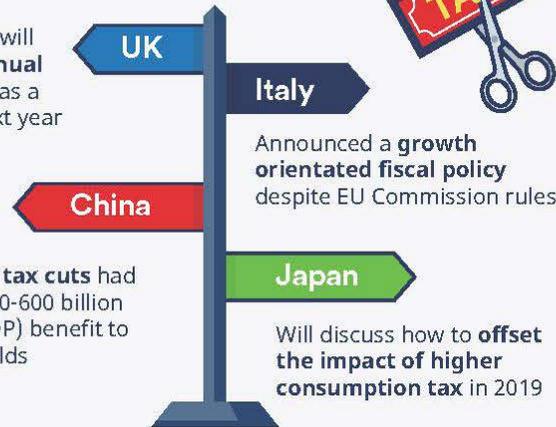

Past performance is not a guide to future performance and may not be repeated. The value of investments and the income from them may go down as well as up and investors may not get back the amounts originally invested.
Source: Schroders, November 2018. The views for equities, government bonds and commodities are based on return relative to cash in local currency. The views for corporate bonds and high yield are based on credit spreads (i.e. duration-hedged). The views for currencies are relative to US dollar, apart from US dollar which is relative to a trade-weighted basket.

INFOGRAPHIC: THE GLOBAL ECONOMY

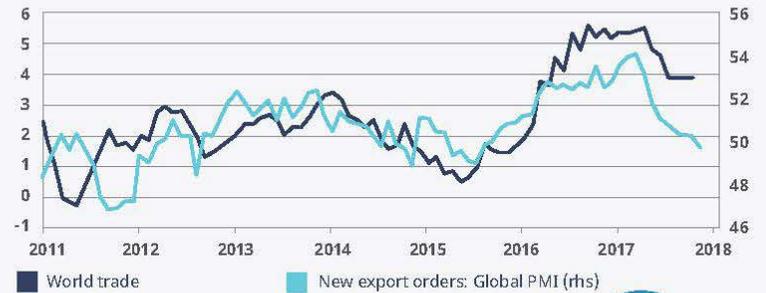

Global: Taking a leaf from the Trump playbook

Are governments following the US lead and turning to fiscal policy, such as tax cuts?

Fiscal giveaways will **increase the annual borrowing** level as a share of GDP next year

Global trade to slow further?

Source: Thomson Reuters Datastream, Schroders Economic Group, 23 October 2018. World trade year on year 3 monthly moving average.

Looking ahead
Pressure on governments to deploy new tax and spending policies to support faltering growth

Emerging markets: Brazil backs Bolsonaro

Jair Bolsonaro becomes president-elect

Election win bolsters investor sentiment and asset prices

Confidence in Brazil's prospects is resurgent but:

Fiscal reform and in particular pensions reform is desperately needed

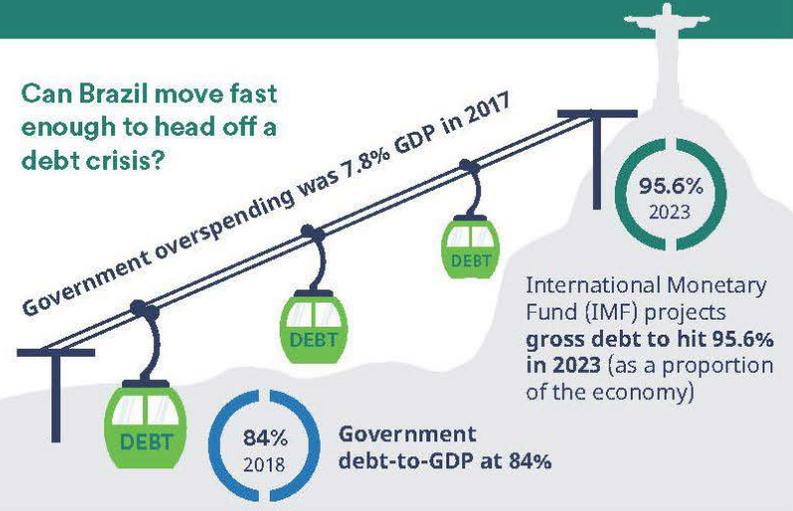

We need to keep an eye out for any **wavering in policy intent**

A good economic news story for now, but the real test is yet to come

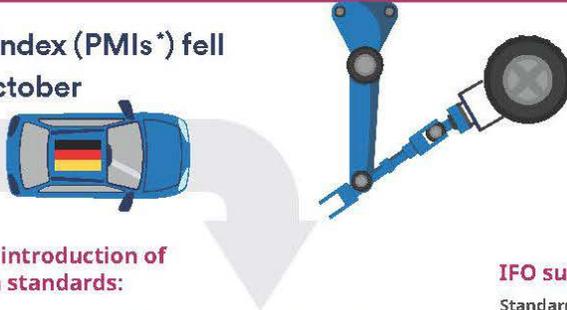

Can Brazil move fast enough to head off a debt crisis?

Eurozone: Keep calm and carry on

Purchasing managers index (PMIs*) fell from 54.2 to 52.7 in October

Led by a decline in car production

Good news

European Central Bank (ECB) President Mario Draghi refers to **slump in car production** as an isolated factor at his latest press conference

Spain and France had their best quarter of industrial production since 2017

Which was prompted by the introduction of the new worldwide emission standards:

Germany's car industry has been most affected compared to the rest of Europe

Overall industrial production is lowest in Germany declining by 1.2% in Q3

The big picture for the eurozone remains healthy. GDP growth is still above trend:

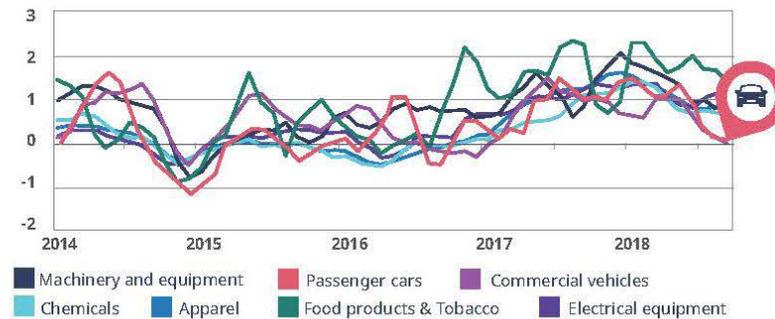

Falling unemployment

Above average wage growth

IFO survey: production data for Germany shows car sector is weak

Standardised balances (3-month moving average)

MONTHLY MARKETS REVIEW

Global equities posted modest gains in November but trade wars and growth worries remained clouds on the horizon.

HIGHLIGHTS

- After October's sharp falls, global equity markets regained some of their poise to post modest gains in November. Government bond yields were broadly lower.
- US equities moved higher. Concerns over trade and slowing earnings persisted but were offset by Federal Reserve (Fed) comments suggesting that it is unlikely to increase the pace of rate hikes.
- Eurozone equities declined. Worries over economic growth and trade wars persisted, as did nervousness surrounding the Italian 2019 budget proposal.
- UK equities performed poorly, with lower crude oil prices weighing heavily on the large cap integrated oil and gas companies. Brexit uncertainty also pulled down sectors with significant domestic UK exposure.
- Japanese equities saw positive returns, helped by the comments from the US Fed and a rebound in economic data from the previous month's natural disaster-induced weakness.
- Emerging markets (EM) equities rallied on the Fed's more moderate policy stance. A fall in crude prices supported countries that are net importers of oil.
- In bond markets, the US 10-year Treasury yield fell (i.e. prices rose) from 3.14% to 2.99% over the month.

THE US

US equities closed higher in November. Shares climbed early in the month before giving up much of the gain in the second half. Economic data remained encouraging and the labour market remains especially strong. US payrolls added 250,000 jobs in October, more than consensus expectations. The gain also suggests that the employment trends remain solid, and that the weakness registered in September was only temporary. The unemployment rate held steady at 3.7% and average hourly earnings grew to 3.1% year-on-year, the strongest pace of wage gains seen since 2009.

Even so, Federal Reserve (Fed) Chairman Powell struck a more dovish tone than he did in October, suggesting additional interest rate hikes may be limited. The Fed left rates unchanged, as expected. As a result, although trade concerns persist and a number of high profile tech firms warned on profits, markets made modest progress. The Q3 results season was, overall, very positive.

Most market sectors gained ground, with healthcare and real estate companies sectors amongst the best performers. Technology firms – notably Apple - were weaker as investors digested the prospect of slower earnings. Energy firms were hurt by the sharply lower oil price, which fell on a supply glut driven by Saudi Arabia and the US.

The midterm elections were largely as expected with the Democrats taking the House of Representatives while the Republicans held the Senate. This could mean less fiscal support for the economy as Democrats are unlikely to back further tax cuts.

EUROZONE

Eurozone equities experienced another disappointing month. The MSCI EMU index returned -0.9%. Worries around the sustainability of global growth, trade wars and corporate profits continued to build. Economically sensitive sectors such as materials and information technology were among the worst performers while defensive sectors – such as communication services, utilities and consumer staples – registered the best returns.

Economic data within the eurozone continued to indicate slower growth. The flash composite purchasing managers' index^[1] for November came in at 52.4, a 47-month low. Data showed the German economy contracted by 0.2% in the third quarter of 2018, largely due to a trade slowdown as car manufacturers struggled to prove that vehicles met new emissions standards.

The dispute over Italy's 2019 budget continued. The European Commission rejected the draft plans and recommended putting disciplinary procedures in place, which could lead to Italy being fined for non-compliance with budget rules. Brexit remained an important political focus. The EU approved the draft Withdrawal Agreement negotiated with the UK. However, uncertainty remains as the deal could be rejected by the UK parliament in a vote planned for 11 December.

UK

UK equities performed poorly, with lower crude oil prices and broader concerns around the global macroeconomic outlook weighing heavily on the large cap resources sectors. Brexit uncertainty also negatively impacted sentiment towards those areas with significant UK domestic exposure.

With the notable exception of the tobacco sector, a number of the market's defensive sectors extended their recent strong run. The tobacco companies performed very poorly amid growing concerns around a possible US regulatory crackdown, including tough restrictions on menthol cigarettes.

The UK government finalised a "withdrawal agreement" with the EU. However, the agreement received fierce push-back and several senior and junior ministers resigned in protest, posing significant uncertainty over the prime minister's leadership and the final parliamentary passage of the deal.

UK Q3 GDP growth came in at 0.6% quarter-on-quarter as expected, up from 0.4% in Q2 and the fastest pace since Q4 2016. The latest labour market report contained mixed surprises, with a rise in the unemployment rate from 4.0% to 4.1% alongside a further acceleration in year-on-year pay growth from 3.1% to 3.2% in the three months to September, the fastest rate since December 2008. More recent data, however, pointed to slowing momentum in Q4: UK retail sales disappointed in October, falling -0.5% month on month after a buoyant summer.

JAPAN

Equity markets continued to be volatile in November but a late rally left the Japanese stock market 1.3% higher for the month. There were no strong trends in major currencies, with the yen weakening slightly against the dollar. Sector performance was very mixed. Financial stocks, including banks, underperformed sharply, returning to the relative lows seen in June. Value^[2] stocks more broadly also underperformed, reversing the upward move seen in the previous month.

Markets were somewhat directionless in the first part of the month. There was then a more consistent rally into month-end, as some change was detected in the likely pattern of US interest rate rises. Economic data released in November clearly showed a rebound from the previous month's weakness, which was largely related to a succession of natural disasters. There are now some signs that the rate of improvement in the labour market may be peaking. The economy has effectively been operating at full employment for some time, and we continue to see evidence of this flowing through to higher wage growth.

On the corporate front, Nissan grabbed the headlines following the arrest of Carlos Ghosn and his subsequent removal from his position as chairman of the company. Away from the spotlight, however, Japanese companies announced record levels of share buybacks in the wake of their interim results, as the trend towards better shareholder returns continues. A buyback, also known as a share repurchase, is when a company buys its own outstanding shares to reduce the number of shares available on the open market.

ASIA (EX JAPAN)

Asia ex Japan equities rebounded in November amid optimism over a more gradual pace of interest rate hikes in the US. Positive corporate earnings news also provided support, while the plunge in crude oil prices boosted net oil importers. Trade negotiations between the US and China continued to dominate sentiment.

Across the region, Indonesia and India, both major oil importers, recorded the strongest gains as oil prices slumped and their currencies strengthened. The Indonesian rupiah was further buoyed by Bank Indonesia's surprise interest rate increase to

6%, from 5.75%. Hong Kong and Chinese stocks outperformed the benchmark amid mixed economic data from China. Chinese exports rose 15.6% year-on-year in October, while imports grew 21.4%. Industrial production and fixed-asset investment accelerated, though retail sales growth slowed. The official purchasing managers' index also missed market expectations in November.

Conversely, markets in Malaysia and Thailand retreated. Taiwanese stocks were dragged lower by declines in the healthcare sector and technology heavyweights. Separately, Taiwan's president resigned as leader of the ruling Democratic Progressive Party following losses in local elections. South Korean stocks also lagged. The Bank of Korea raised its benchmark interest rate by 25 basis points to 1.75%, the first hike in a year, on concerns over capital flight (i.e. investors moving money out of the country), high household debt and Seoul's property boom. Elsewhere, the Philippine central bank also lifted borrowing rates to rein in rising inflationary pressures.

EMERGING MARKETS

Emerging markets equities rallied on the prospect of a more moderate outlook for US monetary policy. A correction in crude oil prices was supportive of those emerging markets that are net importers of oil. The MSCI Emerging Markets Index posted a positive return and outperformed the MSCI World.

Those markets most sensitive to external pressures recorded the strongest gains, led by Turkey. Indonesia, India and South Africa, and the Philippines also outperformed, with currency appreciation amplifying returns in all five markets.

Chinese equities rebounded in anticipation of some form of positive outcome from the Trump-Xi meeting at the G20 summit in Argentina at the end of the month. US tariff hikes scheduled for 1 January have since been delayed. Meanwhile, domestic activity indicators remained relatively weak and the authorities announced further support measures.

On the negative side, Mexico recorded a negative return with domestic economic policy concerns weighing on sentiment.

GLOBAL BONDS

In bond markets, the US 10-year Treasury yield fell from 3.14% to 2.99% over the month on Fed chair Jerome Powell's comments on the path for interest rates. The mid-term election results effectively also made further pro-growth measures less likely. German Bund 10-year yields fell from 0.39% to 0.31% as regional data remained soft. UK gilt yields were down from 1.44% to 1.36%.

Tensions between Brussels and Italy persisted regarding budget plans. The spread (or difference) between Italian and German 10-year government bond yields fell back below 300 basis points towards month end, having peaked earlier in the month at above 320bps.

Corporate bonds saw further negative total returns and underperformed government bonds as risk sentiment remained subdued. Emerging market (EM) hard currency and corporate bonds registered modest negative returns. Local currency EM performed well as the US dollar softened and various currencies, notably Turkish lira, Indonesian rupiah and South African rand, rallied. The Indian rupee performed well, benefiting from the

decline in the oil price.

Global stock markets bounced a little after the heavy set-back in October. Convertible bonds benefited from the tailwind and returned 0.6%, as measured by the Thomson Reuters Global Focus Convertible index. The current set up of the balanced convertible universe looks protective compared to history. The overall credit rating is a stable BBB+ average, which gives comfort these companies will survive in more difficult conditions. The expensive valuation levels in the US and in Europe have come down significantly while Japan and Asia ex Japan continue to trade below fair value.

COMMODITIES

The S&P GSCI Spot Index declined in November, owing to a sharp fall in the energy component. Brent crude prices declined amid ongoing oversupply concerns, and deterioration in the outlook for demand. The industrial metals component recorded a positive return; rising expectations for some easing in US-China trade tensions proved supportive of spot prices. Copper prices bounced back following recent weakness, while zinc and lead posted modest gains. The soft commodities component recorded a small gain. A rise in soybean prices was supportive, while coffee prices were down. In precious metals, gold generated a slight gain while silver prices were weaker.

¹ The eurozone purchasing managers' index is produced by IHS Markit and based on survey data from around 5,000 companies based in the euro area manufacturing and service sectors. A reading above 50 indicates expansion.

²Value stocks are those that are perceived to be undervalued compared to their fundamentals, such as earnings, dividends or sales.
